

ATDrive route encoder of record (RelGraph R2-noLane): what each block computes

$d = 64$, 4 heads of 16, softmax temperature $\tau = 0.5$, 90,177 effective parameters; AdamW lr $1e-3$, weight decay 0.1, batch 64 routes, 30 epochs; trained per draw on the 180 calibration-type routes x 12 calibration planners, 3 seeds
